

Features

- Seating and choral risers are created by locking together multiple tiers of our stage decks. This can be accomplished using standard or custom stage decks in a variety of surfaces and layouts to create “U” shaped, “V” shaped, straight or custom riser systems. Wunderstructures can be used in conjunction with fixed height legs allowing you to bridge tiers left to right and front to back. Accessories such as guardrail, chairstops and closure panels enhance the appearance of the riser system while providing additional safety measures. Tiers can be over-hung to minimize space and choral risers can be dismantled and re-configured for use in multiple applications including rolling risers, main stages, spotlight or camera platforms.
